Declaration of Net-Zero by 2025

Alset Integrated Energy Hong Kong Limited and A&C Green Creations Philippines Corporation

Operating under the brand sunE hereby declares to achieve Net-Zero/Carbon-Neutral across our entire supply chain by 2025.

With this move, sunE plans to take a leading role in the low-speed electric vehicle (LSEV) industry with the transformation towards an Ecological Economy and Net-zero carbon as well following best practices in environment, social and governance (ESG) reporting.

As of DATE we have already achieved Net-Zero with our solar/electric shuttle service operating since 2016 in Batangas, Philippines, which successfully operated before the pandemic. A number of net-zero products from solar lighting to energy harvesting to methane mediation to planting trees are under development. We are currently developing a catalog of items and suggestions which will help people and/or their businesses achieve net-zero.

Join the sunE community as we dare to take small steps forward relentlessly as leaders in the ecological economy bringing sustainable prosperity.

For more examples of Net-Zero leadership in action, please check the following:
